

NAGRA SCOUT DEFENSE PRO

Advanced Business Protection

Offer small businesses advanced protection that keeps digital assets, connected services and operations secure.

Small businesses face growing cybersecurity risks but often lack dedicated IT and security resources. NAGRA Scout Defense Pro helps operators deliver advanced cybersecurity services that protect business devices, networks, applications and operations. Powered by NAGRA Scout threat intelligence, NAGRA Scout Defense Pro combines advanced threat protection, network visibility and AI-assisted support to help businesses stay secure, productive and resilient while enabling operators to create premium service value.

NAGRA Scout Synthesis helps operators understand service adoption, improve engagement and identify opportunities to grow customer value.

Additionally, NAGRA Scout supports operators in fulfilling the requirements of Regulation (EU) 2024/2847 Cyber Resilience Act (CRA), aligning your operations with EU standards.

Solution Benefits

- 1 Boost Revenue:** Expand your portfolio with premium cybersecurity services that help small businesses secure digital operations and maintain productivity.
- 2 Enhance Offerings with Service Insights** Use NAGRA Scout Synthesis to understand service adoption, improve engagement and identify opportunities to increase customer value.
- 3 Reduce Operational Costs:** Empower business customers to resolve common network and service issues independently while reducing support pressure and operational costs.
- 4 Strengthen Security Posture:** Help small businesses improve protection across connected devices, applications, users and services.
- 5 Ensure Business Continuity:** Help reduce disruption by protecting business operations from cyber threats, vulnerable devices and network issues.

Protect Business Operations Without Enterprise IT Complexity

Visibility

Device & Category Filtering: Discover and categorize connected business devices to improve visibility, management and operational awareness.

Protection

Malicious Website Protection: Help block phishing, malware, scams and harmful websites across business environments.

Anomaly Detection: Identify unusual behavior that may indicate security risks or compromised devices.

Botnet Defense (DDoS): Help prevent business devices from participating in malicious network activity.

Network Scan: Identify potentially vulnerable or suspicious devices across the business network.

External Threat Monitoring: Monitor and defend against evolving threats that may impact business operations.

DNS Security: Help reduce exposure to unsafe domains and suspicious destinations.

Zero-Day Protection: Support protection against previously unknown vulnerabilities and emerging threats.

Personal Data Leakage Prevention: Help identify and reduce risks to sensitive business or customer information.

Control

Content Filtering: Apply category-based filtering policies across business environments.

Internet Access Control: Manage usage policies and internet access across connected devices.

Support

AI-Assisted Troubleshooting: Help businesses resolve network and connectivity issues faster.

Service Optimization: Improve performance across commonly used business applications and services.

Network Health Monitoring: Provide visibility into network performance and operational status to help identify issues before they impact productivity.

How It Works

NAGRA Scout Defense Pro combines advanced threat protection, network visibility, connected-device intelligence and AI-assisted support within a single cybersecurity service for small businesses. Powered by NAGRA Scout threat intelligence, NAGRA Scout Defense Pro helps organizations stay secure, productive and resilient across their digital environments.

Operators benefit from premium service differentiation, reduced support pressure and actionable service insight that supports engagement and growth.

Key Capabilities

Protect business environments against phishing, malware and scams.

Identify suspicious activity and emerging threats.

Provide AI-assisted troubleshooting and network insight.

Discover and manage connected business devices.

Support business policies through filtering and access controls.

Improve operational visibility and business resilience.

Business Protection Capabilities

Business Device Visibility: Help understand and manage connected devices across the business network.

Business Continuity: Help reduce disruption by protecting business devices, services and operations.

Network Health Visibility: Gain insight into network performance before issues impact productivity.

Data Protection: Help reduce risks to sensitive business and customer information.

Simplified Cybersecurity: Access advanced protection without dedicated IT or security expertise.

Critical Business Systems Protection: Help safeguard connected systems that support day-to-day operations and customer service.

Expand Into SMB Cybersecurity Services

Create premium cybersecurity services for SMB customers.

Differentiate business connectivity offerings.

Increase customer trust through advanced protection and support.

Reduce support pressure through AI-assisted troubleshooting.

Generate additional value beyond connectivity.
